

Skill Lab Roster Guide

Ten custom champions for Teamfight Manager 2: full kits, stats, Mod Power, lanes, difficulty, matchups, hard counters and the Map tab plans.

Mods	tfm2_custom 0.1.68 · tfm2_jjk 0.1.28 · tfm2_jojo 0.1.16 · tfm2_cyberpunk 0.1.14 · tfm2_ultrakill 0.1.15 · tfm2_starwars 0.1.12 · tfm2_frieren 0.1.15 · tfm2_blockcraft 0.1.18 · tfm2_valorant 0.1.12 · tfm2_toon 0.1.4
Native rules	tfm2_custom_ai 0.7.16 (needed by every champion here; run build.bat after updating the source)
Mod Power	A per-champion stat bonus (round 55) that lifts each mod champion to about its base class median by mid-game: up to +30% attack (V1) or +15% AP; none for Minato and Steve. Base champions are unchanged.
Date	03 October 2026
Numbers	From the champion data and native rules as deployed. Seconds = game ticks / 60. A melee basic attack reaches about 23000 units, a base-game ranged one about 60000.
Matchups	Design-based reads of how the kits interact, not measured win rates. Check them against real matches.

Roster at a glance

Difficulty (1-10) is how much the kit depends on the right conditions: positioning, resources, timing windows and the team around it. The AI pilots in TFM2, so a high score means the coach has to draft and set up the fights for it; a low score means it works almost anywhere.

Champion	Class / tags	Lane	Difficulty	Damage	Range	Power spike	Countered by
Minato	Assassin AD · CC · Range	Jungle alt: Mid	9/10 ■■■■■■■	Physical (AD)	Kunai 50000 · fan up to 170000	Mid game (5 stacks + Kurama Mode)	V1, Gojo, Vader (light)
Gojo	Magician AP · CC · Melee	Mid alt: Top	7/10 ■■■■■■■	Magic (AP), some physical	Melee (23000) · orbs 70000 · Purple crosses the map	Once his ult is learned (unlocks Hollow Purple)	David, DIO, Omen (light)
DIO	Assassin AD · CC · Melee	Top alt: Jungle	7/10 ■■■■■■■	Physical (AD)	Stand In 23000 · Stand Out 41000 · knives 160000	Mid game (time stop online)	V1, Minato
David	Assassin AD · Melee · CC	Jungle alt: Top	6/10 ■■■■■■■	Physical (AD)	Melee (23000) · S2 up to 90000	Early-mid game (before cyberpsychosis builds)	Vader, Steve (light)
V1	Assassin (gunner) AD · Range	Bottom alt: Mid	6/10 ■■■■■■■	Physical (AD)	Pistol 30000 · railgun 260000	Mid-late game (coin + shotgun split shot)	Vader, David
Darth Vader	Melee AD · Tank · CC · Melee	Top alt: Support	3/10 ■■■■■■■	Physical (AD)	Melee line (26000) · saber 112000 · choke 70000 wedge	Teamfights (rage fills fastest when focused)	Frieren, Gojo / DIO / Omen (light)
Frieren	Magician AP · CC · Range	Mid alt: Bottom	5/10 ■■■■■■■	Magic (AP)	70000 (Limiter +15000) · Fern 150000	Mid game (Limiter release)	Minato, DIO, Gojo / David / V1 / Steve (light)
Steve	Support (Util) Tank · CC · Shield · Melee	Support alt: Top	7/10 ■■■■■■■	Physical (scales with max HP)	Pickaxe 23000 · rod 70000-154000 · pearl 70000 · wall 300000 long	Objectives and teamfights (every 80 s wall)	V1, Minato / DIO (light)
Omen	Controller (Util) AD · CC · Range	Support alt: Mid	8/10 ■■■■■■■	Physical (AD, guns)	Gun 18000-80000 · step 50000 · Paranoia 140000 · ult map-wide	His first real gun (Sheriff from 800, Vandal from 2900)	Minato, V1 (light)
Scribble	Magician AP · CC · Range	Mid alt: Support	10/10 ■■■■■■■	Magic (AP)	Darts 60000 · spells 28000-160000 · two hit the whole map	The athlete's mastery: Expert (30 games) knows 4-dot spells	Gojo, DIO

Lane guide

TFM2 lanes are Top, Jungle, Mid, Bottom and Support. Bold = best lane, plain = workable.

Lane	Champions	Why
Top	DIO, Darth Vader , Gojo, David, Steve	Durable or self-sustaining fighters who hold a long lane alone: Vader's bulk and rage, DIO's Stand In lifesteal, Gojo's Infinity against skill-based laners, Steve's 1150 HP against melee bruisers.
Jungle	Minato, David , DIO	Mobile divers who pick their fights: Minato's kunai teleports and David's Sandevistan. Short fights also keep David's cyberpsychosis low.
Mid	Gojo, Frieren, Scribble , Minato, V1, Omen	Mages and burst: Frieren's 70000 poke, Gojo's flags and domain, Minato as a roaming assassin, Omen's map-wide ult.
Bottom	V1 , Frieren	Damage carries: V1 (coin, shotgun, 260000 railgun) and Frieren as a ranged AP carry.
Support	Steve, Omen , Darth Vader, Scribble	Map changers and peelers: Steve's wall, rod rescues and apple; Omen's smokes and blind; Vader's undodgeable choke.

Mod Power: stats to par, kits as the edge

Testing mod champions only against each other is elephant vs elephant: the stronger one always wins, it gets nerfed, and the cycle never ends. In a real match a mod champion fights the base roster. Round 53 gave every mod champion a flat +30% attack and AP and +20% HP. Round 55 makes it **per champion and lower overall**: each one is lifted only to about its base class median by mid-game, so their kits (teleports, parries, domains, walls, smokes) are what makes them the elephants. Minato gets none.

Why five mod champions lost to five base champions

- **Mod Power wasn't on yet.** The game log of that session shows native rules **0.6.9** loading, a build from before round 53. Mod Power (and the round 54 Omen fixes) only arrive with build.bat.
- **They fall behind as they level.** The mod assassins grow 20-22 attack a level against 30 for the base assassins, so by level 10 DIO, David, V1 and Minato have 70-76% of a base assassin's attack; Gojo and Frieren 85-88% of a base mage's AP (table below). The 1v1 nerf rounds pushed them there.
- **Longer ults.** Base ults come back in 50 s (40 s for supports); the mod ults take 55-90 s.
- **Their kits can hurt their own team.** David's gravity pins teammates, his hallucinations hit them and his grab blast hurts himself; Paranoia blinds teammates on its line; Steve's wall blocks his own side too; DIO deals 40% less in his time stop.
- **Many skills wait for a setup** (Steve's wall, DIO's time stop, Gojo's domain on three or more) and fire less often against base teams than in tests built around them.
- **No real comp.** Five of the nine together means no healer or enchanter and four assassins, against a drafted base team. Omen also has no items, only guns.

Per champion (lib.rs MOD_POWER)

Champion	Attack	AP	HP	Armour	MR	Why
Minato	0	0	0	0	0	None: his kit carries him (Rian's call).
Gojo	0	+15%	+5%	+5%	+5%	AP 85% of the base Magician median at level 10; a little HP and resists for a melee mage.
DIO	+25%	0	0	0	0	Attack 76% of the base Assassin median at level 10. HP and armour are already above it.
David	+25%	0	0	0	0	Attack 75% of the median at level 10. HP already above.
V1	+30%	0	+5%	+10%	+10%	Attack 70% of the median at level 10, the lowest here, and the frailest body.
Darth Vader	+5%	0	0	0	0	Already at the Melee median; a nudge.
Frieren	0	+25%	+10%	+15%	+10%	AP 88% and armour 78% of the median at level 10; raised to +25% AP and +10% HP in round 71 (she had been falling behind).
Steve	0	0	0	0	0	None: well above the Util median everywhere; his value is the wall.
Omen	+10%	0	+10%	+10%	+10%	No items, only guns: some HP and resists so he survives to his first good buy.
Scribble	0	+10%	+5%	0	+5%	Base mage numbers; a little AP so a Novice athlete is not a dead pick. Mastery is his real power.

Level 10 against the base roster

Attack (magic power for the two mages) and HP at level 10, against the median of the base champions in the same class at level 10. Green = above the median. Move speed: +0% for all (was +5%).

Champion	Class	Damage stat	Without	With Mod Power	Class median	HP without	HP with	HP median
Minato	Assassin	Attack	272	272	390	1715	1715	1620
Gojo	Magician	Magic power	186	214	220	1705	1790	1800
DIO	Assassin	Attack	298	372	390	1808	1808	1620
David	Assassin	Attack	293	366	390	1760	1760	1620
V1	Assassin	Attack	274	356	390	1608	1688	1620
Darth Vader	Melee	Attack	270	284	275	2090	2090	1900
Frieren	Magician	Magic power	194	242	220	1735	1908	1800
Steve	Util	Attack	161	161	134	2230	2230	1800
Omen	Util	Attack	196	216	134	1755	1930	1800
Scribble	Magician	Attack	134	134	134	1800	1890	1800

How to test from now on

- **Check the build first.** The game log (TeamfightManager2/data/log.log) should say "tfm2_custom_ai 0.7.16 loaded".
- **Mixed teams, not only 1v1.** 5 mod vs 5 base is the honest test, but give the mod side a real comp (Steve or Vader in front, Omen or Frieren behind). If they still lose, raise the champion who falls behind in the table above, not everyone.

Matchup matrix

Read across: how the champion on the left fares against the one on top. ++ hard counter, + favoured, = even, - unfavoured, -- hard countered. Every pair is mirrored (a ++ on one side is a -- on the other). Both sides have their Mod Power, which only brings stats to par, so it hardly changes these reads. Scribble is read at Expert; his page shows how each matchup moves with his athlete's rank.

	Minato	Gojo	DIO	David	V1	Vader	Frieren	Steve	Omen	Scribble	Net
Minato		--	+	=	--	-	++	+	+	=	0
Gojo	++		-	--	=	+	+	=	-	+	+1
DIO	-	+		=	--	+	++	+	=	+	+3
David	=	++	=		+	--	+	-	=	=	+1
V1	++	=	++	-		--	+	+	+	=	+4
Darth Vader	+	-	-	++	++		--	=	-	-	-1
Frieren	--	-	--	-	-	++		-	=	=	-6
Steve	-	=	-	+	-	=	+		=	=	-1
Omen	-	+	=	=	-	+	=	=		-	-1
Scribble	=	-	-	=	=	+	=	=	+		0

What the matrix says

- **V1 is the anti-gimmick pick.** His parry answers Minato's teleports, DIO's dash, Omen's Paranoia and Steve's boat (one parry breaks the whole wall). He still has nothing to parry against areas and melee wedges, which is why Vader and David beat him. Since round 25 his raw damage is lower, so the good net is matchups, not stats.
- **Vader is the safest blind pick.** Nothing can dodge or parry the choke, a blind doesn't stop it, and hit-spam champions charge his rage. He loses to range: Frieren, and Omen once he has a long gun.
- **Gojo punishes skill damage and loses to basic attacks.** Frieren and Minato struggle into Infinity; David, DIO's Stand Out and Omen's guns tear through it, and a blind sends his flags into shadows.
- **Steve and Omen are map pieces, not duelists.** Their reads are close to even because their value is the wall and the smokes in 5v5. Steve beats champions without a blink (David, Frieren); blinkers (Minato, DIO) and V1 beat Steve.
- **Frieren is the most counterable.** Strong only against slow melee like Vader. Draft her late, behind a front line or a wall.
- **Scribble is even on paper and decided by mastery.** Gojo (Infinity cuts his skills) and DIO (a freeze mid-weave) are his worst; Vader and Omen (a blind doesn't stop spells) his best. A Novice loses most of these; an Archmage wins more.
- **Three-way rings** (Minato > Frieren > Vader > Minato, V1 > DIO > Vader > V1, Steve > David > Gojo > Minato > Steve) keep any single pick from being safe against everything.

Minato

Flying Raijin assassin: mark with kunai, flash in, strike, flash out.

Assassin · Lane: Jungle (alt Mid) · Difficulty 9/10 · Physical (AD) · Custom (tfm2_custom)

Range	Kunai 50000 · fan up to 170000
Power spike	Mid game (5 stacks + Kurama Mode)
Tags	AD · CC · Range
Difficulty	9/10 ■■■■■■■■■ Everything runs on two resources at once: kunai on the ground (teleport spots and dodge charges) and dodge stacks (they power his slash and Rasengan). With no kunai and no stacks he is a weak melee.

Stat	Base	/level	With Mod Power	Assassin median
HP	950	+85	950	900
Attack	92	+20	92	120
Magic power	0	+0	0	0
Armour	25	+7	25	25
Magic resist	15	+3	15	15
Move speed	1120	+14	1120	1100

Green / red base stats are above / below the base-game Assassin median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Basic attack 0.83 s · range 50000	A thrown kunai (70% AD) that marks the enemy with his seal for 4 s: his next teleport goes straight behind a marked enemy. With the Rasengan charged, the kunai carries it: he flashes behind the champion it hits and slams it. Kurama Mode: a piercing kunai (85% AD) through everything in a line.
S1 · Flying Raijin 7 s · range 160000	Three casts on one cooldown. 1st: a wide fan of three straight kunai (middle one 40 + 60% AD to the first champion hit), each lying on the ground up to 12 s. 2nd and 3rd (ready ~0.9 s after the throw): teleport to the best kunai. Engage = the kunai next to the weakest enemy (never into 3+ enemies, a deadly tower or a danger zone); escape when low = only a kunai clearly further from the enemies. Every teleport slashes where he lands: 75 + 115% AD with 3+ stacks (spends 2), else 35 + 55% AD. Hit and run: 0.4 s after an attacking teleport he flashes back if it is still safe.
S2 · Rasengan 14 s (6 s charge + 8 s)	Charges his next hit for 6 s (+20% attack speed). 50 + 80% AD, +20% AD per dodge stack (50 + 180% at 5). After a teleport it fires on arrival if he has a stack to spare (stun 0.75 s, spends 1); otherwise his next kunai carries it. Kurama Mode: an instant Big Ball Rasengan around him (60 + 90% AD, +15% per stack).
Ult · Kurama Mode 60 s · 15 s duration	Orange chakra cloak. One long homing kunai (320000, through walls, 60 + 80% AD) that splits into 5 more (3 ahead, 2 back). +20% move speed, +15% attack speed, +50% cooldown speed, 10% less damage taken, 2 s crowd-control immunity, piercing kunai that fly 2x as far and 1.5x as fast; his dodge sees shots 50% further out.
Passive · Dodge and stacks every 1.5 s	A shot from an enemy champion about to hit him: he flashes to a kunai out of its way (using it up) or sidesteps (every 3 s), leaving a 0.5 s afterimage that takes the hit. Each dodge = 1 stack (max 5, 7 s): +8% attack, +6% attack speed, +5% move speed each; 10% lifesteal at 5. Melee dodge: spends a stack to flash out of a basic attack (every 3 s). Steps out of DIO's mark and David's gravity; never teleports into a domain or time-stop field.
Passive · Backpack max 2 · every 2 s	Walking over a safe kunai picks it up. When he is chasing, or no kunai of his is down, he throws one from the pack (70% range, 20 + 30% AD); if it lands on an enemy he flashes there at once. Kunai teleports go over Steve's wall.

How the AI plays it

He fights from range: the AI throws kunai (marking targets) and the native rules turn that into hit-and-run. They do all the kunai work: throw, choose the teleport spot, refuse suicide teleports, rethrow stale fans, use the backpack while chasing, and jump Steve's wall when it cuts him off from a teammate in trouble.

Strengths	Weaknesses
- Untouchable by projectile-based champions once kunai are down (Fern, Paranoia, Steve's hook all feed stacks) - Huge gap-close range (kunai 145000-170000, Kurama kunai 320000) and his own escape route - Stack-scaled burst: 5 stacks turn slash + Rasengan into a kill combo - Teleports go over walls, Steve's boat wall included	- Weak with no stacks: 35 + 55% slash and 50 + 80% Rasengan; kunai basic attack only 70% AD - Melee hits can only be dodged by spending a stack (every 3 s) - His burst is skill damage: Infinity cuts it by 75% - V1's parry is aimed straight at his teleport strikes

Hard counters / countered by

V1	Every teleport slash and Rasengan checks V1's parry first; a parried Minato eats a double-pump shotgun, whose pellets are instant and can't be dodged.
Gojo	Infinity cuts skill damage, which is most of Minato's burst, by 75%, and the domain seals him in place.
Vader (light)	The choke wedge is not a projectile, so there is nothing to dodge.

Strong against

Frieren	Every Zoltraak is a projectile = free dodge stacks, and Fern can't follow his teleports.
DIO	Stand In knives are projectiles to dodge; he never teleports into the time-stop field.
Steve / Omen (light)	The rod hook and Paranoia are projectiles he dodges for stacks; his kunai teleports skip the boat wall.

Plays well with

Vader / David	Their crowd control keeps targets next to his kunai, so his engage teleports land.
Steve	A boat wall traps a group; Minato is one of the few who can teleport onto the trapped side.

Matchups at a glance

Gojo	DIO	David	V1	Vader	Frieren	Steve	Omen	Scribble
--	+	=	--	-	++	+	+	=

Coach tips

- › Pick him into teams with lots of champion projectiles and few melee bruisers.
- › He wants a front line: he engages second, after the first CC lands.
- › Don't pick him into V1 + Gojo; both turn off his burst.

Gojo

Infinity and Unlimited Void: a melee mage who seals the whole fight.

Magician · Lane: Mid (alt Top) · Difficulty 7/10 · Magic (AP), some physical · Jujutsu Kaisen (tfm2_jjk)

Range	Melee (23000) · orbs 70000 · Purple crosses the map	Stat	Base	/level	With Mod Power	Magician median
Power spike	Once his ult is learned (unlocks Hollow Purple)	HP	850	+95	892	900
Tags	AP · CC · Melee	Attack	70	+14	70	80
Difficulty	7/10 ■■■■■■■■■■ His damage comes through flags (Blue, Red, Purple) fired by basic attacks, so he must be in melee reach. The domain is game-winning when it seals three or more, wasted on one.	Magic power	60	+14	69	40
		Armour	25	+6	26	20
		Magic resist	25	+2	26	20
		Move speed	1080	+10	1080	900

Green / red base stats are above / below the base-game Magician median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Passive · Infinity breaks, back after 15 s	Skill damage to him is cut by 75% and basic attacks by 30%; whatever gets through wears Infinity down (it holds 200 + 50% AP). His basic attacks add 35% AP magic damage.
S1 · Blue 12.5 s	Raises the Blue flag for 5 s. His next basic attack launches the Blue orb (40 + 40% AP), which collapses into a black hole that yanks enemies within 32000 to its centre (60 + 80% AP; 100 + 80% from level 3).
S2 · Red 10.5 s	Raises the Red flag. The next basic attack fires a fast shot that shoves the first enemy (40 + 50% AP) and explodes there, blasting everyone around away (40 + 50% AP). A flag left unused fires by itself after 1.25 s.
Hollow Purple Blue + Red together	Once the ult is learned: with both flags up, the next basic attack winds up 0.57 s and fires a huge slow orb across the map (200 + 160% AP), knocking back everyone it hits. 20 s lockout; Blue and Red recharge 50% slower for 21 s.
Ult · Unlimited Void 60 s · radius 76000	A seal spreads from his spot; every enemy it reaches can't move, attack or cast until the domain closes. Slow cast (Infinity up): spreads 2.5 s, seal until 6.5 s, then +100% cooldown speed, +30% damage, +25% move and attack speed for 10 s. Fast cast (Infinity broken): 0.75 s spread, seal until 2.75 s, +15% damage, +40% move and attack speed. Nothing from outside can hurt him; his closest teammate stays free; crowd-control immunity doesn't save anyone.

How the AI plays it

The native rules time the domain (slow vs fast cast), keep its edge as a wall, and fire Purple, Blue and Red on sealed enemies inside. Outside the domain he trades flags in melee range.

Strengths	Weaknesses
• Skill-damage casters do only a quarter of their damage while Infinity holds • Unlimited Void is the biggest teamfight lock in the roster • Hollow Purple: map-wide 200 + 160% AP • His free teammate inside the domain gets his buffs	• Lowest HP here (850) and melee range on a mage • Fast basic attacks shred Infinity (only 30% reduction) • His flags ride on basic attacks: Omen's blind sends them into shadows • The domain is wasted if it catches one target

Hard counters / countered by

David	Sandevistan's attack speed rips through Infinity (3rd hit shatters it), and gravity pins Gojo before the domain is up.
DIO	Stand Out punches are basic attacks (Infinity only takes 30% off them), and the time stop freezes Gojo mid-cast.
Omen (light)	A blinded Gojo swings his flags at shadows; Omen's guns are basic attacks.

Strong against

Minato	His slash and Rasengan are skill damage (cut by 75%); the domain takes his kunai routes away.
Frieren	Fern, Stark and every Zoltraak except her basic attack are skills: Infinity cuts them by 75%.
Vader	Saber throw and choke damage are skills; Vader's slow walk lets the seal reach him.

Plays well with

Vader / Steve	The choke knockback and the boat wall herd enemies into the domain's spread.
V1 / DIO	Basic-attack damage is what the free teammate wants: the sealed enemies are free hits.

Matchups at a glance

Minato	DIO	David	V1	Vader	Frieren	Steve	Omen	Scribble
++	-	--	=	+	+	=	-	+

Coach tips

- > Draft him into skill-heavy teams (mages, Frieren, Minato).
- > Keep him away from fast basic attackers until the domain is ready.
- > A teamfight at a tower or objective (or behind a Steve wall) is where the domain catches three or more.

DIO

Two modes: Stand Out at range, Stand In for lifesteal, and two seconds of stopped time.

Assassin · Lane: Top (alt Jungle) · Difficulty 7/10 · Physical (AD) · JoJo (tfm2_jojo)

Range	Stand In 23000 · Stand Out 41000 · knives 160000	Stat	Base	/level	With Mod Power	Assassin median
Power spike	Mid game (time stop online)	HP	980	+92	980	900
Tags	AD · CC · Melee	Attack	100	+22	125	120
Difficulty	7/10 ■■■■■■■■■■ The modes switch by themselves (target in melee reach = Stand In, 38000+ = Stand Out, at most every 5 s), and both skills change with the mode, so his strength depends on the spacing of each fight.	Magic power	0	+0	0	0
		Armour	28	+7	28	25
		Magic resist	20	+4	20	15
		Move speed	1080	+12	1080	1100

Green / red base stats are above / below the base-game Assassin median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Basic attack 1 s	Stand In: a melee hit (100% AD) with 12% lifesteal. Stand Out (range 41000): the Stand rushes to the target and punches it there (60% AD per punch, +45% attack speed), no lifesteal. Against towers he always uses Stand In.
S1 · Guard / Knife fan 10 s per mode · range 160000	Stand Out: the Stand stands guard. It blocks the next champion shot (he takes 75%, no CC) or counters the next melee hit (stun 0.75 s and a barrage of 6 × (6 + 12% AD)). Stand In: three straight knives (30 + 60% AD each); in stopped time four knives hang in the air until time moves. If this mode's version is on cooldown, casting it switches stance.
S2 · Lunge / Dash strike 11 s per mode	Stand Out: the Stand winds up 1 s, then lunges through walls; on a champion it grabs it by the neck and pummels it for 0.7 s (5 × (10 + 14% AD), 40% slow). Stand In: a red "!" and a gold strip, then 0.6 s later DIO vanishes and reappears behind the target (60 + 100% AD, stun 0.6 s). The dash strike goes over Steve's wall.
Ult · ZA WARUDO 90 s · radius 76000	Only when it catches enough (2+ enemies, or one with help near or at 40% HP or less; chained onto anyone caught by CC). He blinks in up to 41000, then time stops for 2 s. Every other champion inside is frozen except his closest teammate, who moves with him. Both get +100% cooldown speed and +20% move and attack speed, and deal 40% less damage while time is stopped.

How the AI plays it

A native passive draws the Stand pose by pose, picks the mode, holds the guard, and runs the lunge, grab and dash. The match hook runs knives and the time stop, including the blink-in and the free teammate.

Strengths	Weaknesses
- Works at two ranges: punches from 41000 or melee with lifesteal - Guard blocks one shot or punishes one melee hit for free - Lunge goes through walls; the dash strike lands behind backliners (and over a boat wall) - Time stop freezes a whole fight for 2 s, now with a free teammate	90 s ult, the longest in the roster - Damage is 40% lower during his own time stop - Mode lock: at most one switch every 5 s - Stand Out has no lifesteal; Stand Out punches are basic attacks, so a blind wastes them

Hard counters / countered by

V1	The dash strike and counter both check V1's parry; a parried DIO eats the double pump. (The time stop can't be parried.)
Minato	Dodges the knives for stacks and never teleports into the time-stop field.

Strong against

Frieren	An immobile backliner: the lunge goes through walls, the dash lands behind her, the time stop freezes Fern and Stark.
Gojo	Stand Out punches are basic attacks that break Infinity; the time stop lands before the domain.
Vader / Steve	Stand Out out-ranges Vader (41000 vs 26000); the dash strike skips Steve's wall.

Plays well with

Gojo	Time stop + domain back to back is 6+ seconds of lock.
Vader	Vader's choke is crowd control, and DIO chains the time stop onto anyone caught by it.

Matchups at a glance

Minato	Gojo	David	V1	Vader	Frieren	Steve	Omen	Scribble
-	+	=	--	+	++	+	=	+

Coach tips

- > Pick into immobile carries and mages.
- > Avoid teams with V1 unless V1's parry is drawn out first.
- > Best when he starts fights at range (Stand Out) and finishes in melee (Stand In lifesteal).

David

Sandevistan diver living on a cyberpsychosis meter.

Assassin · Lane: Jungle (alt Top) · Difficulty 6/10 · Physical (AD) · Cyberpunk (tfm2_cyberpunk)

Range	Melee (23000) · S2 up to 90000	Stat	Base	/level	With Mod Power	Assassin median
Power spike	Early-mid game (before cyberpsychosis builds)	HP	950	+90	950	900
Tags	AD · Melee · CC	Attack	95	+22	119	120
Difficulty	6/10 ■■■■■■■■■■ Strong fights push his cyberpsychosis up (+10/s on Sandevistan, +10 or +15 per S2, +25/+40 per ult). His best S2 (70+) and fastest Sandevistan (80+, 100) live at the dangerous end of the bar: from 70 his hits can hit teammates, at 100 he burns 7% max HP per second until he dies.	Magic power	0	+0	0	0
		Armour	25	+7	25	25
		Magic resist	18	+3	18	15
		Move speed	1100	+12	1100	1100

Green / red base stats are above / below the base-game Assassin median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Basic attack 0.92 s · range 23000	100% AD melee hit. From 70 cyberpsychosis it can hit a teammate or himself; at 100 it spills onto teammates.
S1 · Sandevistan fuel bar	On while there is fuel: +40% move speed, +50% attack speed, enemies around him slowed 35% (move and attack). Drains 22/s, refills 8/s, usable again from 15. Triggers itself to escape when he is low (cyberpsychosis under 60). v2 from 80 (red fire): another +25% move and +35% attack speed, +10% attack, 8% lifesteal. v3 at 100 (blue fire): another +50% move and +60% attack speed, +20% attack, 15% lifesteal, 15% less damage taken. While on, his basic attacks ignore Infinity's cut and his 3rd hit on Gojo within 3 s shatters it.
S2 · Changes with the meter 8 s · range 90000	0-34: pistol barrage, 6 homing shots (8 + 18% AD each). 35-69: cyber dash, he runs in and slams (50 + 95% AD, 1 s stun around him) with a small gravity pull. 70+: Sandevistan rush grab (stun 1.25 s, 40 + 70% AD), then an explosion (60 + 90% AD around him, which also hurts David); +15 cyberpsychosis.
Ult · Gravity projection 60 s · range 80000	Area (other enemies near the target, +25): a 40000 crosshair, 0.6 s later gravity ×100 pins every champion inside, both teams, for 1.5 s. Lock-on (a lone target worth it, +40): a 30000 crosshair that follows them, 1 s later a 2.5 s pin. Only David moves. The smash shatters Gojo's Infinity. If it catches nobody, it's wasted.
Passive · Cyberpsychosis 0-100	Drains 4/s after 2.5 s without Sandevistan. The higher it is, the slower his cooldowns come back. Death resets it.

How the AI plays it

A native passive runs the fuel bar, the cyberpsychosis meter and its tiers, the gravity area-or-lock choice and the escape trigger.

Strengths	Weaknesses
• Highest sustained attack speed in the roster under Sandevistan • Slows everyone around him while it's on • Gravity pins whole groups (only he moves) • S2 turns from poke into a dash slam, then a rush grab, as the meter climbs	• Long fights destroy him (hallucinations at 70, death spiral at 100) • His grab explosion hurts him; gravity pins his own teammates • A blind (Paranoia) turns his hit spam onto shadows • No blink: a boat wall cuts him off cleanly

Hard counters / countered by

Vader	Every light hit gives Vader a stack; Sandevistan fills Vader's rage by itself. The choke stops his dive cold.
Steve (light)	The boat wall splits him from his target and the rod drags him into Steve's team; he has no blink to get over.

Strong against

Gojo	Sandevistan shatters Infinity on the 3rd hit and gravity shatters it outright.
V1	Gravity is an area, not a shot: V1 can't parry it; the rush grab closes the distance instantly.
Frieren	A fast dive onto a slow ranged mage.

Plays well with

Frieren / V1	Long-range damage into his gravity zone while everyone is pinned.
Omen	Smoke over the target, then a dive from inside it: they never see him coming.

Matchups at a glance

Minato	Gojo	DIO	V1	Vader	Frieren	Steve	Omen	Scribble
=	++	=	+	--	+	-	=	=

Coach tips

- › Short fights: engage, kill, back off so the meter drains.
- › Don't pair him with a melee team that stands inside his gravity.
- › Strong early; fall back to support play if games drag on.

V1

Parry-machine gunslinger: coin tricks, double-pump shotgun and a 3-shot railgun.

Assassin (gunner) · Lane: Bottom (alt Mid) · Difficulty 6/10 · Physical (AD) · ULTRAKILL (tfm2_ultrakill)

Range	Pistol 30000 · railgun 260000	Stat	Base	/level	With Mod Power	Assassin median
Power spike	Mid-late game (coin + shotgun split shot)	HP	870	+82	914	900
Tags	AD · Range	Attack	94	+20	122	120
Difficulty	6/10 ■■■■■□□□□□ His best damage comes after a parry (the parry is up only while S2 is ready) or from the coin, and his pistol range is short (30000). Against teams with nothing to parry he is a fragile gunner.	Magic power	0	+0	0	0
		Armour	22	+6	24	25
		Magic resist	15	+3	16	15
		Move speed	1100	+12	1100	1100

Green / red base stats are above / below the base-game Assassin median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Basic attack 0.83 s · range 30000	100% AD pistol shot. After a parry: a double-pump shotgun, two blasts 0.2 s apart (the second at 70%), 6 pellets each (22% of a basic attack per pellet at point blank, falling off to 25% of that at the end of its range).
S1 · Coin toss 7 s · range 60000	Flips a coin toward the enemy (60% of the way, at most 40000 out). His next basic attack shoots the coin and the shot ricochets into every enemy champion within 60000 of it (the attack + 30 + 45% AD, shared). If nothing shoots it, he shoots it himself at its peak (60% of a basic attack). With the shotgun loaded it's a split shot: every enemy near the coin takes 50% of the ricochet.
S2 · Parry 10 s	Up only while S2 is ready; a parry puts it on cooldown. A dangerous champion shot (Purple, Fern's big beam, anything as hard as his own hits, Omen's Paranoia, anything while he's low) or an enemy teleporting next to him: 0.1 s window, the hit does nothing. Then 3 s of +10% to +25% attack (half as attack speed), +20% move speed and the shotgun. Parrying Steve's boat breaks the whole wall. Not during Railgun; can't parry domains, time stop or areas.
Ult · Railgun 55 s · 15 s window	His next 3 basic attacks are railgun shots: range 260000, piercing every champion and minion in the line (not towers), 35 + 65% AD.
Passive · Blood every 8 s	Champions he hits leave a blood pool for 10 s (one every 12 s); standing on one heals 70 HP.

How the AI plays it

A native passive times the parry, decides whether pressing forward is worth it (not under a tower, not into a crowd, not when low), and shoots the coin at the right moment. It also spots Paranoia early and treats it as always dangerous.

Strengths	Weaknesses
- Hard answer to teleport assassins (Minato, DIO's dash) - Parries Paranoia and breaks Steve's whole wall with one parry - Railgun pierces whole lines from 260000 - Coin + shotgun split shot is the biggest single burst in the roster	- Short pistol range for a ranged carry - Low HP (870) and armour (22) - Parry is useless against areas, domains, time stop and melee wedges - Round 25 cut his attack (108 to 94) and the coin, shotgun and railgun ratios

Hard counters / countered by

Vader	The choke is a melee wedge, not a shot: no parry. Vader is tanky and V1 has to stand within 30000.
David	Gravity is an area; the rush grab gives no time; Sandevistan slows his attack speed.

Strong against

Minato	Parries the teleport slash and Rasengan; the shotgun pellets can't be dodged.
DIO	Parries the dash strike and counter barrage.
Steve	One parry on the boat ram breaks the whole wall.

Plays well with

Gojo	Sealed enemies in the domain are free railgun lines.
Vader / Steve	A front line that holds melee divers off him.

Matchups at a glance

Minato	Gojo	DIO	David	Vader	Frieren	Steve	Omen	Scribble
++	=	++	-	--	+	+	+	=

Coach tips

- › Draft him against dive assassins, teleporters and wall comps.
- › He needs a front line: on his own, melee bruisers walk over him.
- › Save Railgun for lined-up enemies (choke, gravity, domain, a group trapped by a wall).

Darth Vader

Slow, tanky enforcer whose rage is fuelled by every hit he takes.

Melee · Lane: Top (alt Support) · Difficulty 3/10 · Physical (AD) · Star Wars (tfm2_starwars)

Range	Melee line (26000) · saber 112000 · choke 70000 wedge	Stat	Base	/level	With Mod Power	Melee median
Power spike	Teamfights (rage fills fastest when focused)	HP	1100	+110	1100	1000
Tags	AD · Tank · CC · Melee	Attack	90	+20	94	95
Difficulty	3/10 ■■■■■■■■■■ A simple bruiser: walk in, choke, slash. His rage charges by itself from hits taken. The only skill is aiming the choke wedge at more than one enemy.	Magic power	0	+0	0	0
		Armour	35	+9	35	30
		Magic resist	25	+4	25	20
		Move speed	1000	+10	1000	1000

Green / red base stats are above / below the base-game Melee median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Basic attack 1.17 s · range 26000	A lightsaber swing that cuts every enemy in a line in front of him (100% AD). Just before it lands, a red line on the ground shows where the cut will go.
S1 · Saber throw 12 s · range 112000	The saber spins out in a straight line (50 + 90% AD to everything it cuts), then flies back (25 + 45% AD). No basic attacks while it's away.
S2 · Force choke 13 s · cast from 60000	Everyone in a big V-shaped wedge (70000 long, about 90° wide) aimed at his target is lifted and choked for 1 s (20 + 40% AD); his target can't step out of its edge. Then two saber swings: 20 + 40% AD, then 30 + 60% AD with a knockback. The whole move is one 1.6 s animation.
Ult · Vader's rage at 10 stacks	+40% attack and +100% cooldown speed for 8 s (uses the stacks).
Passive · Stacks max 10	Every hit he takes adds a stack, however small; one big hit is only one stack.

How the AI plays it

A native passive counts the stacks, runs the saber's flight and the choke sequence (lift, two slashes, knockback).

Strengths	Weaknesses
- Tanky (1100 HP, 35 armour, 110 HP/level) - The choke is multi-target CC that nothing in the roster can dodge or parry, and it still works while he is blinded - Many small hits (David, Minato, Stand punches, Omen's Spectre) power his rage - Line-cleave basic attack	- Slowest champion (1000 move speed) - Locked into his own 1.6 s choke, even when it catches no one - Burst damage gives only one stack per hit - Kited by long range (Frieren, Omen's Operator)

Hard counters / countered by

Frieren	Out-ranges him almost 3x (70000 vs 26000) and slows him with Stark; her big hits barely build his rage.
Gojo / DIO / Omen (light)	Infinity cuts his skills by 75%; Stand Out punches from range; Omen kites him from smoke.

Strong against

David	Sandevistan hit spam fills his rage; the choke stops the dive.
V1	Nothing V1 can parry; V1 has to stand close to shoot.
Minato	The choke can't be dodged; the knockback throws him off his kunai.

Plays well with

Gojo / Steve	Choke + knockback herd enemies into the domain or against the boat wall.
V1 / Frieren / Omen	He holds the line in front of a fragile damage dealer.

Matchups at a glance

Minato	Gojo	DIO	David	V1	Frieren	Steve	Omen	Scribble
+	-	-	++	++	--	=	-	-

Coach tips

- › The safest pick here: Top or front-line Support.
- › Strong against dive comps and hit-spam carries.
- › Pair him with a ranged carry so the kite-and-poke teams that beat him are punished.

Frieren

Long-range mage with a party: Fern's Zoltraak and Stark's leap.

Magician · Lane: Mid (alt Bottom) · Difficulty 5/10 · Magic (AP) · Frieren (tfm2_frieren)

Range	70000 (Limiter +15000) · Fern 150000	Stat	Base	/level	With Mod Power	Magician median
Power spike	Mid game (Limiter release)	HP	880	+95	968	900
Tags	AP · CC · Range	Attack	55	+6	55	80
Difficulty	5/10 ■■■■■□□□□□ Mostly point-and-shoot from 70000, but her damage arrives in big, slow, aimed pieces (Fern after 1.5 s, Stark after 0.83 s), and her Limiter release turns her own skills off while the party fights.	Magic power	50	+16	62	40
		Armour	20	+5	23	20
		Magic resist	25	+4	28	20
		Move speed	1000	+10	1000	900

Green / red base stats are above / below the base-game Magician median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Basic attack 2.33 s · range 70000	Zoltraak: a thin white line that pierces everything in its path (10 + 30% AP).
S1 · Fern 10 s · range 150000	Fern appears beside Frieren; after 1.5 s she fires her own Zoltraak (50 + 70% AP), piercing everything in its line, each enemy once: a slow huge beam at a close target, a long thin one at a far target. Towers take no damage.
S2 · Stark 12 s · range 60000	Stark leaps onto the spot where the target stands and lands 0.83 s later: knock-up 0.83 s and 55 + 80% AP in the inner circle (20000), 35% slow for 1.75 s in the outer circle (40000).
Ult · Limiter release 60 s · 8 s	+25% magic power, +15% attack speed, +15000 range. Fern stays by her side firing a homing Zoltraak every 3 s (30 + 45% AP). Stark joins as a targetable companion for 12 s (4 hits or 300 HP + 25% of her max HP): axe every 1.5 s (30 + 35% AP) and one leap onto every new enemy in reach (35 + 50% AP, knock-up). While they're out she can't cast her own Fern or Stark.

How the AI plays it

Native rules place Fern, aim her beam, run Stark's leap and the companion's hop-ins; the companion itself is moved by the game's summon AI.

Strengths	Weaknesses
- Longest basic-attack range here (70000, 85000 in Limiter), piercing - Stark's knock-up + slow is reliable area CC, and skills still hit through a blind - The companion soaks attention and up to 4 hits - Mod Power: +25% AP, +10% HP and +15% armour	- Slowest attack (2.33 s) and slow, readable skill timings - Immobile: no dash, no escape - Fern's beams are projectiles: Minato dodges them, V1 parries them - Most of her damage is skill damage: Infinity cuts it by 75%

Hard counters / countered by

Minato	Every beam is a free dodge stack; he teleports onto her.
DIO	The lunge goes through walls, the dash appears behind her, the time stop freezes her party.
Gojo / David / V1 / Steve (light)	Infinity cuts her skills; David dives her; V1 parries Fern; Steve's rod drags her out of position.

Strong against

Vader	Kites him from almost 3x his range and slows him.
Slow melee base champions	Knock-up, slow and piercing poke from 70000.

Plays well with

Vader / Steve	A front line (or a wall) holds the enemy off while she pokes.
David	Gravity pins enemies in place for Fern's slow beam.

Matchups at a glance

Minato	Gojo	DIO	David	V1	Vader	Steve	Omen	Scribble
--	-	--	-	-	++	-	=	=

Coach tips

- › Pick her behind a front line, into slow melee comps.
- › Avoid her into Minato, Gojo or DIO.
- › Limiter release is a teamfight button: use it when Stark can reach several enemies.

Steve

Block-built support: pearl, TNT and golden apple, a fishing rod, and a boat that leaves a stone wall.

Support (Util) · Lane: Support (alt Top) · Difficulty 7/10 · Physical (scales with max HP) · Blockcraft (tfm2_blockcraft)

Range	Pickaxe 23000 · rod 70000-154000 · pearl 70000 · wall 300000 long	Stat	Base	/level	With Mod Power	Util median
Power spike	Objectives and teamfights (every 80 s wall)	HP	1150	+120	1150	900
Tags	Tank · CC · Shield · Melee	Attack	62	+11	62	80
Difficulty	7/10 ■■■■■■■■■■ His power is one straight wall every 80 s, and where it goes decides the fight. The native rules read the fight for him, and the Map tab lets you add wall plans; a wall in the wrong place helps nobody.	Magic power	0	+0	0	30
		Armour	40	+10	40	20
		Magic resist	35	+5	35	20
		Move speed	1000	+10	1000	1000

Green / red base stats are above / below the base-game Util median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Basic attack 1.08 s · range 23000	A pickaxe swing (100% AD).
S1 · Pearl / TNT / Apple 6 s	He picks the tool the moment needs (shown over his head). Pearl: throws it up to 70000 and teleports where it lands; with an enemy on his rod he throws toward his team and drags them along. TNT: thrown where the target will be; lit if an enemy is near (0.5 s, 40 + 6% max HP, radius 32000, knockback), else a mine for 5 s. Golden apple: heals 60 + 8% max HP and shields 10% max HP for 4 s, on the ally he just hooked or the lowest ally within 60000.
S2 · Fishing rod 8 s · 70000-154000 charged	A big slow hook (catches within 16000) that stops at walls. Enemy: 20 + 2% max HP and reeled to him. Ally in trouble: yanked to him (and gets his next apple). Terrain or a boat wall: he dashes to it. His own TNT: yanked and thrown like a bomb. He knows before the cast whether it will pull or dash.
Ult · Boat 80 s · range 480000	He slides along a straight line in a boat on a trail of ice while a stone wall rises behind it: always 300000 long, for 10 s. It blocks walking, knockbacks and pulls for both teams and blocks sight like terrain; only teleports and blinks go over it. The boat rams enemies (30 + 4% max HP, knocked to their side). Allies on the ice get +25% move speed; he is CC-immune while riding. Used to escape, to trap a group, to cut a laner off, to seal an objective. V1 can parry the boat, which breaks the wall.

How the AI plays it

Native rules pick the tool, aim the rod (pull vs dash) and choose the wall: escape first, then picks, objective walls and fight walls, scored by how many his side can bring. He pings his team to the wall when going in wins. Map plans (Wall here) add spots he prefers, and he skips a plan when the line is already blocked by terrain, another wall or one of Omen's smokes.

Strengths	Weaknesses
• Tankiest here (1150 HP, 40 armour, 35 magic resist, 120 HP/level); his TNT, rod, apple and boat scale with max HP • The wall changes the map: splits teams, seals objectives, blocks sight • Saves teammates three ways (rod yank, apple, wall between them and the chasers) • Few counters among base champions: almost none of them blink	• Low damage (attack 62); his kills come from his team • One parry from V1 breaks the whole wall • Teleports skip the wall (Minato, DIO's dash, Omen's step and ult) • The rod hook is a slow projectile that Minato dodges

Hard counters / countered by

V1	Parrying the boat ram breaks the wall; V1's team then walks through the trap.
Minato / DIO (light)	Kunai teleports and the dash strike go over the wall; the hook is a projectile to dodge.

Strong against

David	No blink: the wall cuts his dive and the rod drags him into Steve's team.
Frieren	An immobile mage: the rod outranges her (154000 vs 70000) and drags her in.
Base melee teams	Bruisers walk around a 300000 wall; by then the fight is over.

Plays well with

Omen	Wall + smoke cut sight completely; the editor's "Omen + Steve" plans share one choke point instead of doubling it.
Gojo / Vader	A trapped group is a perfect domain or choke target.

Matchups at a glance

Minato	Gojo	DIO	David	V1	Vader	Frieren	Omen	Scribble
–	=	–	+	–	=	+	=	=

Coach tips

- › Support, or Top against melee bruisers.
- › Give him wall plans on the Map tab for your objective setups (Serpen, Morgard).
- › Keep V1 busy (or banned) when the plan depends on the wall.

Omen

Shadow controller with a Valorant economy: smokes, a blinding Paranoia, and a map-wide teleport.

Controller (Util) · Lane: Support (alt Mid) · Difficulty 8/10 · Physical (AD, guns) · Valorant (tfm2_valorant)

Range	Gun 18000-80000 · step 50000 · Paranoia 140000 · ult map-wide
Power spike	His first real gun (Sheriff from 800, Vandal from 2900)
Tags	AD · CC · Range
Difficulty	8/10 ■■■■■■■■■■ No items: his strength is the gun he can afford and the credits he earns, so a slow start (no kills, deaths) delays everything else. Smokes reward a coach who sets up Map tab plans; without plans he smokes fights and objectives on his own.

Stat	Base	/level	With Mod Power	Util median
HP	900	+95	990	900
Attack	70	+14	77	80
Magic power	0	+0	0	30
Armour	26	+7	29	20
Magic resist	22	+4	24	20
Move speed	1020	+12	1020	1000

Green / red base stats are above / below the base-game Util median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Passive · Buy Phase credits, no items	Start 1000; kill +300, assist +150 (kills of enemies he blinded or smoked count), +200 every 20 s alive, +50 for every kill his team gets, death +400; a death costs his armor, he keeps his gun. Buys at his spawn or anywhere with no enemy near: the gun first (the best he can pay for; the Operator only from 5500), armor only with the Vandal's price to spare. Guns: Classic (free, 30000), Sheriff (800, 38000, hard-hitting, slow), Spectre (1600, 28000, fast), Judge (1850, 18000, shotgun up to 2.2x point blank with splash), Vandal (2900, 42000, +30% damage), Operator (4700, 80000, +200% damage, very slow). Armor is a shield only buying refills: light 400 (12% max HP), heavy 1000 (25%). His gun and money show over his head.
S1 · Dark Cover 25 s · 2 charges · anywhere	A shadow dome 100000 across (radius 50000) for 10 s. Nobody outside sees in or through it; inside you see only 15000. Shooting or casting from inside reveals you for 0.5 s. One charge comes back on the cooldown, the other is bought (200). Goes on his ult destination (only when no bush hides it), on himself or a chased teammate, around an objective, over a step target, or over the enemy hitting hardest. With enemies on an objective he smokes only its far half (the near half stays in sight to pick them off); in a gank never the target, but behind them or over his teammates. Enemies check a smoke before walking past it.
S2 · Shadow Step / Paranoia 7 s	Used often: chased, he throws Paranoia at the chasers himself; out of fights he steps along his way to travel. Shadow Step: a 0.6 s channel, then a teleport up to 50000, always to the safest spot that does the job (away from visible enemies and enemy towers, toward teammates, bushes and his smokes): out when chased, into a smoke with enemies at it, or within gun reach of a lone enemy. The risky play: behind a low enemy he can finish, cutting their retreat (never when he is low, into 3+ enemies, or under a tower unless the kill is certain). Paranoia: a shadow ball that flies through walls and blinds every champion it touches, teammates too: 5 s up close, 3 s at full range. Normally on a clean line; through a teammate when it blinds 2 more enemies (3 for 1) or 3+ on an engage, or when his side is running. The blinded can only attack shadows of their enemies, which can't be killed; skills still hit. 2+ blinded: he calls his team to rush them. V1 can parry it.
Ult · From the Shadows 80 s · map-wide	He vanishes for a 2 s channel while his shade waits at the destination; killing the shade cancels it. Goes home when chased, into a far fight, into a gank anywhere on the map (behind the enemy, cutting their way home: bot from top), into one of his smokes, behind a low lone enemy, or to an objective the enemies are taking. He lands in a bush first (no warning), else in one of his smokes; smoking the spot is his second option.

How the AI plays it

Native rules run the economy, the fog (smokes and walls hide champions), the reveal when someone shoots from smoke, Paranoia's line (clean, or the trade-off), the unkillable shadows, the rush call. Map plans (Smoke here, Fake smoke) add spots he prefers; he skips a smoke where sight is already cut (terrain, a standing wall, or Steve about to wall the spot).

Strengths	Weaknesses
- Changes what the enemy AI can see: smokes, blind and wall-aware fog - Paranoia blinds a whole line for up to 5 s (basic attacks only hit unkillable shadows), then he calls his team in - Map-wide ult with a bush-first landing: picks, rescues and objective steals - Operator (80000, +200%) out-ranges every other basic attack here	- Low base attack (70) and 900 HP: weak until his first full buy - A death costs his armor and the credits he didn't earn, so a losing game slows his buys - Paranoia is a projectile: Minato dodges it, V1 parries it - Blind also hits his own teammates in the line

Hard counters / countered by

Minato	Paranoia is a dodge stack; kunai teleports find him in his own smoke.
V1 (light)	Parries Paranoia and the Operator shot; pressing forward is exactly what V1 wants.

Strong against

Gojo	A blinded Gojo fires his flags at shadows; Omen's guns are basic attacks that wear down Infinity.
Vader	Smoke and the Operator kite the slowest champion in the roster.
Base ranged carries	Smokes cut their sight; a blind leaves them shooting shadows.

Plays well with

Steve	Wall + smoke: one choke point, both vision blockers, no overlap (they check each other).
David / DIO	Divers who start from inside a smoke.

Matchups at a glance

Minato	Gojo	DIO	David	V1	Vader	Frieren	Steve	Scribble
–	+	=	=	–	+	=	=	–

Coach tips

- › Support or Mid. Expect a quiet early game, then a spike at the first Vandal.
- › Add Smoke plans for objectives on the Map tab; tick "Team has Omen".
- › Keep him alive: his gun is his item build.

Scribble

Toon mage with 35 spells: weave up to six element dots, then Invoke. Who plays him matters more than his stats.

Magician · Lane: Mid (alt Support) · Difficulty 10/10 · Magic (AP) · Toon (tfm2_toon)

Range	Darts 60000 · spells 28000-160000 · two hit the whole map	Stat	Base	/level	With Mod Power	Magician median
Power spike	The athlete's mastery: Expert (30 games) knows 4-dot spells	HP	900	+100	945	900
Tags	AP · CC · Range	Attack	80	+6	80	80
Difficulty	10/10 ■■■■■■■■■■ The hardest pick: everything depends on the athlete's mastery rank (games played on him). A Novice knows 13 spells, weaves slowly, slips and fires at whatever is near; an Archmage knows all 35 and chains a stun into a falling piano.	Magic power	40	+20	44	40
		Armour	20	+7	20	20
		Magic resist	20	+3	21	20
		Move speed	950	+9	950	900

Green / red base stats are above / below the base-game Magician median. "With Mod Power" is level 1 with this champion's Mod Power (round 55).

Abilities

Basic attack 1.5 s · range 60000	A thrown pencil dart (100% AD). The game's AI only moves him and throws darts; every spell is cast by his native passive.
Passive · Mastery per athlete	Mastery points: an official match 1, a scrim or exhibition 0.5, a win x1.5. Novice 0-4 (knows 1-2 dot recipes), Apprentice 5+ (3 dots, +10% weave speed), Adept 15+ (+20%, prepares an opener before a fight and holds it), Expert 30+ (4 dots, +35%, waits for a slow spell's target to be locked down, chains a stun into the big hits), Master 60+ (5 dots, +50%), Grandmaster 100+ (+65%), Archmage 150+ (all 35, +80%). A wrong dot comes out 16% of the time for a Novice, never for an Archmage; low ranks rarely notice and cast the wrong spell. The badge at his top right shows the rank.
S1 · Weave a dot every 0.5 s (0.27 s Archmage)	Up to six dots over his head: 1 Pencil, 2 Eraser, 3 Paint, 4 Gadget, 5 Page. The order matters: 4-4-1 is Mallet, 1-4-4 is nothing. A dot that does not start the spell he wants is flicked away.
S2 · Spell book 35 spells · cooldown per tier	5 one-dot pokes (2-4 s), 8 two-dot tricks (door, shield, heal, peel, speed), 8 three-dot catches (photo stun, mallet, anvil, grab, pie), 6 four-dot plays (hole teleport for the team, group photo, brawl, redraw, stamp, a drawn wall), 5 five-dot teamfight spells (rewind, piano, ink flood, chase scene, laugh track) and 3 six-dot map changers (Page Flip swaps top and bottom, PAUSE freezes every enemy 2 s, Draw a Friend). Cooldowns are per tier: a 5-dot spell locks all 5-dot spells for its cooldown, the other tiers stay free. Full table on the next page.
Ult · Invoke 0.5 s (0.2 s Archmage)	Casts the spell the dots spell out. No recipe, or a spell on cooldown: a puff of smoke. The whole world learns him together: every cast is scored (what it did against what it promised) and the next game's Scribble players pick spells with it.

How the AI plays it

All native: every 0.1 s he values each spell he knows and can have ready (damage, kills, seconds of hard crowd control, healing, shields), weighs it with the learned meta and his rank's noise, weaves toward the best and invokes when it lands. Experienced ranks hold an opener, wait for a lockdown before Anvil or Piano, and chain. The editor's Skill Test tab plays all 35 on dummies; its Scribble memory page shows every athlete's rank and the learned meta.

Strengths	Weaknesses
• The most crowd control in the roster: stuns, roots, silences, a disarm, a map-wide PAUSE • Answers for every situation: escapes (door, hole, redraw, erase), saves (rewind, bucket, cutout, stamp) • Spells are not projectiles: Minato can't dodge and V1 can't parry most of them • Gets better the more he is played, for everyone (the shared meta) and per athlete	• A Novice athlete is a weak mage: slow weaving, slips, wasted casts • Every spell waits on a weave and a cast: burst divers reach him first • All his damage is skill damage: Gojo's Infinity cuts it by 75% • 900 HP, no self-peel at low ranks (the escapes are 2-dot, the good ones 4-dot)

Hard counters / countered by

Gojo	Infinity eats 75% of his skill damage and the domain seals him mid-weave.
DIO	A time stop freezes him with dots up; the dash reaches him before a slow invoke.

Strong against

Vader	Slow and melee: floors, peels, doors and roots keep him out of reach.
Omen	A blind only stops basic attacks; his spells still go off.
Base mages	More crowd control and more answers at Expert and up.

Plays well with

Steve	Wall + PAUSE / Group Photo: the enemies are boxed and frozen.
Vader / David	Divers that walk into his stuns and pianos.

Matchups at a glance

Minato	Gojo	DIO	David	V1	Vader	Frieren	Steve	Omen

Coach tips

- › Mid or Support. Give him to the athlete who will keep playing him: mastery is the stat that matters.
- › Check the Skill Test tab's Scribble memory page for ranks; set games there to test a rank.
- › Early games teach the meta for everyone: expect him to improve over a season.

Scribble by mastery rank

The athlete's rank decides what he knows and how well he casts. Points: an official match 1, a scrim or exhibition 0.5, a win 1.5 times that. A 3-dot spell and a 6-dot spell are timed from the first dot to the spell going off (weave + invoke).

Rank	Points	Knows	Dot every	3-dot cast	6-dot cast	Wrong dot	Notices	Holds	Misreads
Novice Bronze	0+	13 spells 1-2 dots	0.50 s	2.0 s	-	16%	25%	no	±60%
Apprentice Silver	5+	21 spells 1-3 dots	0.45 s	1.8 s	-	11%	45%	1.0 s	±45%
Adept Gold	15+	21 spells 1-3 dots	0.42 s	1.6 s	-	8%	65%	2.5 s	±35%
Expert Platinum	30+	27 spells 1-4 dots	0.37 s	1.4 s	-	5%	85%	4.0 s	±25%
Master Diamond	60+	32 spells 1-5 dots	0.33 s	1.3 s	-	3%	95%	5.0 s	±15%
Grandmaster Ruby	100+	32 spells 1-5 dots	0.30 s	1.1 s	-	1%	100%	6.0 s	±8%
Archmage Rainbow book	150+	35 spells 1-6 dots	0.27 s	1.0 s	1.8 s	0	100%	7.0 s	±3%

"Wrong dot": the chance a woven dot comes out as another element; "Notices": the chance he sees it and flicks the dots away (otherwise the wrong spell, or a fizzle, comes out). "Holds": how long a ready spell is kept for its moment. "Misreads": how far off his read of a spell's value can be.

What each rank adds

Novice	Knows the 1-2 dot spells. Fires a ready spell at whatever is near, even if it misses; rarely notices a wrong dot, so some casts come out as another spell or fizzle.
Apprentice	Unlocks the 3-dot catches (Say Cheese, Mallet, Anvil, Rubber Arm, Erase Legs, Pie, Present, Slippery Floor). Holds a spell 1 s for a target.
Adept	Prepares the opener the situation calls for on the way to a fight (a catch for a gank: Erase Legs, Mallet, Rubber Arm; an area spell for a teamfight; an escape when low) and holds it for the right moment.
Expert	Unlocks the 4-dot plays (Hole Network, Group Photo, Brawl, Redraw, Stamp, Drawn Wall). Waits for a lockdown before Anvil / Present / Piano and chains a stun into the big hits. Re-reads a held spell: re-picks the opener when the situation changes, drops a spell with no use any more, and switches when another is clearly better (30% better at Expert, 15% Master, 10% Grandmaster, 5% Archmage).
Master	Unlocks the 5-dot teamfight spells (Rewind, Piano, Ink Flood, Chase Scene, Laugh Track).
Grandmaster	Almost never slips; reads situations far better (little noise in his choices).
Archmage	Knows all 35, including the 6-dot map changers (Page Flip, PAUSE, Draw a Friend). Never slips.

Matchups by rank

The matrix reads Scribble at Expert. Here is how each matchup moves from a Novice to an Archmage.

Against	Novice	Adept	Expert	Archmage	Why
Minato	—	=	=	+	Spells aren't projectiles, so no dodge stacks for him; but a slow weave lets him slash first. Erase Legs and PAUSE pin him down.
Gojo	--	--	—	—	Infinity eats 75% of his skill damage and the domain seals him mid-weave. Only crowd control (Pie, Laugh Track, PAUSE) helps.
DIO	--	—	—	=	A time stop freezes him with dots up and the dash reaches a slow invoke. An Archmage answers with Redraw and PAUSE.
David	—	=	=	+	Sandevistan dives a squishy mage; from Adept the peels (Rubber Chicken, Pie, Erase Legs) hold him off.
V1	—	=	=	+	The parry only catches projectiles (Paper Cut, Rubber Arm's glove); his shotgun still deletes a Novice.
Darth Vader	=	+	+	++	Slow melee: floors, doors, peels and roots keep him away, and an Archmage pauses his choke.
Frieren	—	=	=	+	Range duel: her slow pieces against his weave. Pie and Laugh Track silence her from Adept on.
Steve	—	=	=	+	The wall cuts him off; Hole Network and Page Flip (Expert, Archmage) jump past it.
Omen	=	+	+	+	A blind only stops basic attacks: his spells still go off. Smokes hide targets from a Novice.

Net over the nine: Novice -9 · Adept -1 · Expert +0 · Archmage +7. A Novice Scribble is a liability; from Adept he holds his own; an Archmage is one of the strongest picks.

Scribble's spell book

Recipe = the dots in order (1 Pencil, 2 Eraser, 3 Paint, 4 Gadget, 5 Page), then Invoke. AP = magic power. Mastery decides which tiers an athlete knows: Novice 1-2, Apprentice and Adept 3, Expert 4, Master and Grandmaster 5, Archmage 6. The cooldown locks the whole tier: after a 5-dot spell, no other 5-dot spell until it is back. When the spell he wants is locked he goes for the next best one, keeping the dots that start it (a Novice notices after 1.5 s, an Apprentice 1 s, an Adept 0.5 s, Expert and up at once).

Recipe	Spell	Cooldown	Known from	What it does
1	Pencil Poke	2 s	Novice	30 + 50% AP to one enemy.
2	Smudge	3 s	Novice	Rubs out the target's shields, then 20 + 30% AP.
3	Paint Splat	3 s	Novice	25 + 40% AP around the target, slowed 20% for 1s.
4	Squeaky Horn	4 s	Novice	HONK: 15 + 30% AP and a 0.2s stun around him (interrupts).
5	Paper Cut	2 s	Novice	A flying page: 40 + 60% AP bleeding over 2s.
1-1	Draw a Door	6 s	Novice	Steps through a door 35000 away (out of trouble, or after a fleeing kill).
1-3	Cutout	7 s	Novice	A cardboard cutout shield 80 + 60% AP for 3s on him or a teammate under fire.
2-1	Erase Myself	8 s	Novice	Invisible for 1.5s.
3-3	Bucket	6 s	Novice	Heals the most hurt teammate near (or himself) 70 + 50% AP.
3-2	Banana Peel	6 s	Novice	A peel on the ground for 5s: the first enemy on it slips (0.5s airborne, sliding).
4-3	Rubber Chicken	5 s	Novice	40 + 50% AP and a knockback.
4-4	Wind-up Key	8 s	Novice	+40% move and attack speed for 3s.
5-4	?! Bubble	8 s	Novice	A confused bubble: the target can't attack for 0.8s.
4-1-5	Say Cheese	10 s	Apprentice	A phone photo: everyone in the cone in front (45000) is stunned 1.2s.
4-4-1	Mallet	9 s	Apprentice	A giant mallet up close: 60 + 80% AP, stun 1s.
4-2-3	Anvil	12 s	Apprentice	A shadow, then an anvil 0.8s later: 90 + 100% AP and a 1s stun to whoever is still under it.
1-5-2	Rubber Arm	10 s	Apprentice	A stretchy glove grabs an enemy up to 90000 away and pulls them in.
2-5-1	Erase Legs	11 s	Apprentice	Rubs out the target's legs: rooted 1.5s.
4-3-3	Pie	10 s	Apprentice	A pie in the face: no skills for 2s, no attacks for 1s.
4-1-1	Present	12 s	Apprentice	A gift box stuck to the target, opening 2s later: 120 + 110% AP around them.
3-1-3	Slippery Floor	14 s	Apprentice	A waxed floor 40000 wide for 4s: enemies on it -30% speed, teammates +25%.
1-4-2-5	Hole Network	18 s	Expert	Draws a hole and pops out 120000 away (home when chased, or into a fight); teammates by him follow 1s later.
4-1-5-5	Group Photo	16 s	Expert	A panorama shot: everyone in a wide cone 70000 deep is stunned 1.5s.
3-4-3-4	Brawl	18 s	Expert	A cartoon dust cloud: the target and anyone by them rooted 2s, 4 hits of 30 + 25% AP.
2-2-5-1	Redraw	16 s	Expert	Erases himself and redraws where he was 3s ago, clearing crowd control.
5-3-4-1	Stamp	20 s	Expert	A giant rubber stamp: enemies around him stunned 1.2s, teammates there shielded 120 + 80% AP.
1-2-1-2	Drawn Wall	20 s	Expert	Draws a wall 90000 long for 5s (between him and his chasers, or behind a fleeing enemy); nobody gets through.
5-5-3-1-4	Rewind	35 s	Master	Teammates within 70000 go back to where they were 4s ago with the health they had then (if it was more).
4-2-4-1-3	Piano	30 s	Master	A shadow, then a grand piano 1s later: 200 + 150% AP and a 1.5s stun in a big circle.
3-5-2-2-1	Ink Flood	30 s	Master	A wave of ink 160000 long: 60 + 50% AP, no attacks for 2s, slowed 40%.
1-3-5-4-2	Chase Scene	28 s	Master	+100% move speed for 4s; every enemy he runs into is bonked once (40 + 40% AP, 0.3s stun).
2-4-1-3-5	Laugh Track	35 s	Master	Canned laughter: enemies within 90000 can't attack or cast for 1.5s, teammates heal 60 + 40% AP.

Recipe	Spell	Cooldown	Known from	What it does
5-5-1-2-3-4	Page Flip	90 s	Archmage	Turns the page: every champion in the top or bottom half swaps sides (top <-> bottom); mid stays.
4-4-4-1-5-2	PAUSE	80 s	Archmage	Pauses the replay: every enemy champion is frozen 2s.
3-1-2-4-5-3	Draw a Friend	90 s	Archmage	Sketches the strongest fallen teammate back in for 10s at 60% of their stats.

New since round 55

Round	What changed
56-57	Omen uses S2 much more (Paranoia at any single enemy on a clean line, steps to better firing spots) and has a better economy : start 1000, kill 300, assist 150, +200 every 20 s alive, +50 per team kill, death +400, he keeps his gun. Enemies he blinded or smoked count as his assists. He buys anywhere out of combat.
58-59	Flash for every champion (base and mod): a 40000 blink on a 120 s cooldown, kept for big moments: running at 20% HP or less with the fight lost (any time at 10%), dodging an ult or another dangerous shot (Hollow Purple, Paranoia, any skill at 30% HP or less), finishing a kill at 15% or less, helping a dying teammate over a wall, and flashing in with an ult ready onto 3+ bunched enemies. Omen throws Paranoia himself when chased.
60	Farming with skills. With no enemy champion in sight, mod champions use their damage skills on camps and waves (plain data versions: Minato's kunai, DIO's knives, Frieren's Fern and Stark, Steve's TNT, ...). Ults stay for champions. David runs his Sandevistan to cross the map; Omen steps along his way.
61	The two simulations of a match agree again. The game runs a precomputed and a live copy of each match; the native memory was shared between them, which made results differ ("server/live simulation diverged" in log.log) and wiped Flash's cooldown. Each copy now has its own.
62	Scribble , the tenth champion: 35 spells from six dots, mastery per athlete and a meta every Scribble player learns from (his pages follow). In the editor, the new Skill Test tab: pick any champion, right-click to move, Q / W / E for its skills (Scribble: R F T G Y weave, E invoke), training dummies with damage numbers and crowd control labels, a gallery that casts all 35 Scribble spells, and the Scribble memory page (ranks, the learned meta, reset).

Before you play

- Run build.bat: the native rules must say "tfm2_custom_ai 0.7.16 loaded" in log.log.
- Scribble (folder Toon) is new: he is in exhibition matches and new careers. Existing careers and the custom database copied their champions when they were made, so he is not in them.
- Data changes to the other nine still need the sync script on the custom database and the active save (game closed).

The Map tab: plans for map-altering champions

Two champions change what the map looks like: Omen (smokes) and Steve (the boat wall). The editor's Map tab lets you draw where they should use them. Other champions don't need plans: they react to the vision these two create.

Part	What it does
Team has	Tick Omen, Steve or both. Each plan is saved for that line-up only, so an "Omen + Steve" plan is never used by a team that only has Omen (e.g. Steve was banned): that team uses its "Omen" plans instead.
Playbook (left)	All plans for the ticked line-up, grouped by trigger, each with an on/off box, edit, duplicate and delete, and a search.
Map (middle)	Place and drag plans. Smoke = a circle 100000 across (the real size); wall = a 300000 line. A ghost on the other side shows the mirrored plan for the other team (mirrored across the river).
Champion tools (right)	Smoke here and Fake smoke (Omen), Wall here (Steve), the trigger and priority of the plan being placed, and "Copy plans from" another line-up.
Triggers	always, early, midgame, late, an objective spawning or being fought (serpen, morgard, epic), after a won or lost fight, ahead / behind, teamfight, defend, attack, gank, isolate, tower.
Saving	Save writes tactics.txt into the native mod folder (backups in editor/backups/tactics). The game reads it at every match start, so plans persist until you change them. No rebuild and no save sync are needed.

How the AI uses a plan

- A plan is a preference, not an order. Omen scores each active smoke plan (20 + 15 per priority) against his own reads (saving a teammate, escape, fights, objectives); an emergency still comes first. Steve scores wall plans 50 + 12 per priority.
- Good macro: neither repeats the other. Omen skips a smoke where sight is already cut (a standing wall within the smoke, every enemy who would look behind terrain, or a ready Steve with a wall plan through the spot), and Steve takes less from a wall inside a friendly smoke.
- Fake smokes are deliberate decoys: no one needs to be there, and enemies still stop to check them.
- Enemies check smokes in their way before walking past; a smoked objective slows the enemy approach on its own.

Starter playbook

The editor ships with a starter of 24 plans (Omen, Steve, Omen + Steve). Rian's saved playbook currently holds 37: 19 for Omen alone, 14 for both, 4 for Steve alone.

Balance review

A read of where each champion sits among the ten after round 62. Mod Power brings their stats to par with the base roster, so this table is about which mod pick is worth drafting, judged in mixed teams. It comes from the numbers, not match results: treat it as a list of things to watch.

Champion	Power read	Why	Lever if needed
Gojo	Strong-leaning	Infinity cuts skills by 75% and the domain is the biggest lock in the game. Mod Power's +15% AP feeds Hollow Purple (200 + 160% AP), the largest single hit here. His brakes: 850 HP, melee range, and basic-attack champions (David, DIO, Omen's guns, the blind).	Skill cut 75% to 60%, or Infinity down 20 s instead of 15 s.
V1	Balanced	Round 25 cut his attack and ratios; the coin, shotgun and railgun are now mid-sized. He has the best matchup net because his parry answers four kits, not because of his damage.	If the parry decides too many fights: buff window 3 s to 2 s.
David	Balanced, rising (round 69)	v2 and v3 now add attack, attack speed and lifesteal on top of the speed (they used to cost attack), so a high meter makes him stronger, not just faster. Full cyberpsychosis still drains 7% max HP a second.	v3 lifesteal 15% to 10% or attack +20% to +10% if v3 wins every fight.
DIO	Balanced	Two ranges, a guard that wins one exchange, and a time stop that now frees a teammate. In return a 90 s ult and 40% less damage inside it.	Time stop damage penalty 40% to 25% if he feels weak.
Darth Vader	Balanced	Tanky, and the only crowd control that can't be dodged, parried or blinded away. The slowest walker.	Shorten the choke hold 1 s to 0.7 s if it feels clunky.
Steve	Balanced (utility)	Low damage, the most HP in the roster, and the only champion who reshapes the map for 10 s. No Mod Power: his stats are above the base supports already.	Wall cooldown 80 s to 70 s if he feels absent; 300000 to 250000 long if walls decide every fight.
Omen	Strong-leaning (untested)	Round 54 fixed his shop (he now buys guns before armor) and lengthened the blind to 3-5 s, which is the longest crowd control here after the domain. Weak before his first Sheriff or Spectre.	Blind 5 s to 4 s up close if it decides fights; starting credits 800 to 1200 if his early game is empty.
Minato	Weak-leaning	Power is in the stack economy; V1 and Gojo shut him off. Rian rates him strong as he is, so he gets no Mod Power.	S1 back to 6 s, or the weak slash 35 + 55% to 45 + 65%.
Frieren	Balanced, rising (round 71)	The most counterable pick, so round 71 buffed her: Fern 50 + 70% AP, Stark 55 + 80% with a 35% slow, Limiter Fern every 3 s, Stark lasting 4 hits, Mod Power +25% AP / +10% HP.	Next lever: Limiter +25% to +40% magic power (a data change, needs the sync).
Scribble	Depends on the athlete (untested)	A Novice is a weak mage; an Archmage has the most crowd control in the game and two map-wide spells. The shared meta also improves every Scribble player as games are played.	Weave base 30 ticks, misfire chances and spell numbers live in scribble.rs; PAUSE / Page Flip cooldowns if they decide games.

Overall

- Against the base roster: with Mod Power, everyone but Minato reaches about their class median attack (or AP) at level 10, and the kits are the edge. MOD_POWER in lib.rs is the knob for "mod vs base", one line per champion.
- Among the ten: no champion wins every matchup and each has at least one hard counter, which keeps the draft interesting. Use the levers above only when one pick wins mixed-team games against the other mod picks too.
- Watch Gojo (the AP bonus feeds Purple) and Omen (new and unmeasured). Minato and Frieren are the most likely to feel weak.

Notes and open questions

Things that change how these champions play and haven't been confirmed in a real match yet:

- **Mod Power** assumes the buff's multipliers are percentages that stack with items (+25 = +25%). Check DIO's or V1's attack in a match; if it barely moves, the unit is different and the numbers in lib.rs need scaling.
- **Omen (rounds 54-55)**: a new gun over his head after his first base visit with 800+ credits, and the money row not clashing with the HP bar; the step landing on safe spots; the 3-5 s blind feeling fair.
- **Omen**: decoy shadows and the Taunt onto them, gun range buffs, the empty-cast haste, the smoke fog and the reveal on shooting from smoke, V1 parrying Paranoia, and the Paranoia sprite pointing the way it flies.
- **Map plans**: that line-up matching ("Team has") picks the right plans in a real draft, and that Omen skips smokes Steve's wall already covers.
- **Game patches**: the game's own balance patches can nerf (or buff) mod champions too. They change the numbers in the career's copy of the data (stats, damage, cooldowns of data skills). Anything run by the native rules (kunai, Stands, the wall, smokes, all of Scribble's spells, Mod Power) is not touched by a patch. Re-running the sync script puts the mod's numbers back over a patch.
- **Steve**: the wall's sight blocking against base champions, and teleports going over it.
- **Flash**: about once per 2 minutes per champion, and only in big moments; no "diverged" lines in log.log.
- **Scribble**: the invoke pose (an Animation crowd control named "ult"), the dots and badge over him, the athlete id reaching scribble_log.txt, ranks rising after 5 games, Draw a Friend's spawned unit, and Page Flip's landing spots.
- Every champion needs the native rules mod (tfm2_custom_ai 0.7.16). Without it, kunai, Stands, parries, cyberpsychosis, the choke, Fern and Stark, Steve's tools and wall, Omen's economy and smokes, and Mod Power don't work.

Glossary

AD / AP	Damage from Attack / Magic power. "60% AD" = 60% of the champion's attack.
Mod Power	The native per-champion stat buff (round 55): it brings each mod champion to about its base class median by mid-game. Set in MOD_POWER in lib.rs; Minato and Steve get none.
Skill vs basic-attack damage	Matters against Gojo (Infinity cuts skills by 75%, basic attacks by 30%) and against a blind (a blinded champion's basic attacks go at shadows; skills still hit).
Projectile	A shot that travels. Minato can dodge champion projectiles; V1 can parry the dangerous ones (Paranoia included). Areas, melee swings and wedges are not projectiles.
Teleport / blink	Minato's kunai, DIO's dash strike, Steve's pearl, Omen's step and ult. The only way over a boat wall.
Smoke / fog	Omen's Dark Cover and Steve's wall hide champions behind them from the enemy AI, like terrain.
Credits	Omen's Buy Phase money; he buys guns and armor at spawn instead of items.
Range units	Game distance. A melee basic attack is ~23000; base ranged champions ~60000; the domain and time stop have a radius of 76000; a smoke is 100000 across; a wall is 300000 long.
Ticks	The game runs 60 ticks per second; all times here are converted to seconds.
Flash	Every champion's 40000 blink (120 s), used only for big moments (round 58-59).
Mastery	Scribble's per-athlete rank from games played on him (Novice ... Archmage). It sets what he knows and how well he casts.
Native rules	The tfm2_custom_ai mod: the Rust code that runs everything the data format can't.
